

CLOSED LOOP TREATMENT

5014

CONCENTRATED CORROSION INHIBITOR FOR CLOSED Recirculating Systems

Application

Bond 5014 is a synergistic blend of organic corrosion inhibitors for hot and chilled closed loop systems. 5014 provides superior corrosion protection for multi-metal systems. This product is a unique blend of two organic inhibitors and an aromatic azole designed for use where aggressive water is used for system makeup. 5014 incorporates a special color indicator for easy determination of product residual. 5014 is suitable for use in brine systems.

Advantages

- Compatible with glycol solutions
- Contains no heavy metals
- Multi-metal protection
- Cost effective

Dosage

Residual levels of 5014 depend upon water quality and temperature. Your Bond Water Technologies Representative will provide you with proper control requirements.

Feeding

5014 may be added by pumping into system or by using by-pass feeder connected across the circulating pump, or by any other convenient means.

Product Data

FORM:	Liquid
pH:	13.3
SPECIFIC GRAVITY:	1.182

Handling

Contact with eyes can cause moderate irritation and may result in permanent eye damage. Direct skin contact can cause reddening and slight irritation. Prolonged or
